World Space Week OCTOBER 4-10

# World Space Week 2025

## IMPACT REPORT

### Space Clubs LASU

Theme: Living in Space

October 4–10, 2025

Official Partners: SPACE GENERATION ADVISORY COUNCIL

INSPIRE EDUCATE ENGAGE

# Foreword

World Space Week provides an important opportunity to reflect on humanity's growing presence beyond Earth and to inspire the next generation to actively participate in shaping that future.

In 2025, Space Clubs LASU, under the global theme **"Living in Space"** explored not just space exploration, but the practical, social, and technological realities of sustaining life beyond our planet.

Throughout this week, we engaged university students, secondary school students, and young innovators through webinars, outreach programs, innovation challenges, and interactive sessions designed to make space science accessible, relevant, and inspiring. Each activity was intentionally structured to spark curiosity, build knowledge, and encourage critical thinking about the role of space in solving global challenges.

We extend our sincere appreciation to our speakers, partners, sponsors, volunteers, and participants whose contributions made World Space Week 2025 a success. As we look ahead, **Space Clubs LASU** remains committed to creating platforms that inspire, educate, and engage young people in the wonders of space science and technology.

INSPIRE EDUCATE ENGAGE

# World Space Week 2025 Overview

World Space Week 2025 at Lagos State University was designed as a seven-day program that combined knowledge dissemination, innovation, outreach, and engagement which screams class and excellence. Guided by the global theme "**Living in Space**," the week explored how humans survive, work, innovate, and build sustainable systems beyond Earth.

The program targeted university students, secondary school students, young professionals, and space enthusiasts. Activities were delivered through a blend of virtual and physical engagements, ensuring accessibility while maintaining strong interaction and participation throughout the week.

The event lineup included **two webinars, a call for articles, a two-day secondary school outreach, a virtual hackathon, and a closing movie night,** all strategically arranged to build momentum and sustain engagement across the week.

# Event Highlights and Impact

## Virtual Webinar on Living in Space (General / Non-Technical)

The opening webinar, anchored by an Astronaut Candidate introduced participants to the concept of living in space from a non-technical perspective.

Discussions focused on how astronauts live and work in microgravity, the challenges of daily life in space, and how space technologies impact everyday life on Earth.

The session attracted a diverse audience of students and space enthusiasts, setting the tone for the week and providing foundational understanding for subsequent activities.

Participants gained a broader appreciation of space exploration and its relevance to modern society.

## Call for Articles

The call for articles provided participants with an opportunity to reflect deeply on the theme "Living in Space" through research and creative expression.

We had 14 Article entries which Participants explored topics ranging from future space habitats to the role of space technology in addressing challenges on Earth.

This initiative promoted scientific communication, critical thinking, and creativity, while also encouraging participants to engage with space topics beyond surface-level understanding. Selected submissions demonstrated strong originality and insight, highlighting the intellectual engagement generated by the week with the top 2 selections being published on Decentralized Science Nigeria (DeSci NG) – Africa's first decentralized research infrastructure and on our LinkedIn page.

## Secondary School Outreach – Day 1

The first day of the secondary school outreach saw us introducing 150+ students of Rosenik College to basic space concepts in a fun and relatable manner. Sessions covered the history of space exploration, the space race, World Space Week, life in space, Nigeria's contributions to space exploration, and most importantly the role they can play in space exploration

Interactive demonstrations and quizzes were used to sustain interest and participation. Students actively engaged with facilitators, asked thoughtful questions, and expressed excitement about space science and future possibilities.

## AstroVate Virtual Hackathon

The AstroVate virtual hackathon served as the innovation core of World Space Week 2025. Participants worked in teams to propose solutions to space habitation related challenges aligned with the theme of living in space, including habitation, sustainability, health, and technology.

With 8+ teams competing, the challenge encouraged teamwork, problem-solving, creativity, and technical thinking.

Teams presented their ideas to a panel of judges, showcasing innovative concepts and practical approaches to space-related problems. The hackathon demonstrated the potential of young innovators with the wining team winning a Cash Prize of 20,000 Naira.

## Secondary School Outreach – Day 2

The second day of the secondary school outreach saw us introducing 50+ students of Temrej International Academy to basic space concepts in a fun and relatable manner. Sessions covered the history of space exploration, the space race, World Space Week, life in space, Nigeria's contributions to space exploration, and most importantly the role they can play in space exploration

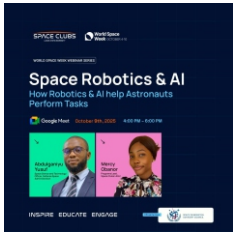

Interactive demonstrations and quizzes were used to sustain interest and participation. Students actively engaged with facilitators, asked thoughtful questions, and expressed excitement about space science and future possibilities.

## Technical Webinar on Living in Space

The technical webinar themed "Space Robotics & AI: How Robotics & AI help Astronauts Perform tasks" provided an in-depth exploration of the engineering and scientific innovations that help astronaut survive in space. Topics included life support systems, microgravity effects, spacecraft design considerations, and current research trends.

This session targeted students with technical interests and provided valuable insights into real-world applications of aerospace engineering and space science. Participants gained exposure to advanced concepts and career pathways in the space sector.

## Space Movie Night and Closing Ceremony

The closing movie night served as both a reflective and celebratory conclusion to the week. A space-themed film titled "**The Martian**" was screened, followed by a guided discussion linking the movie's themes to real-world space exploration and the overall focus of World Space Week 2025.

The event also provided an opportunity to acknowledge participants, volunteers, and partners, and to reflect on the collective impact of the week's activities.

# Secondary School Outreach Impact

The secondary school outreach component of World Space Week 2025 reached **200+ students**, introducing them to space science in an engaging and age-appropriate manner.

By combining education with interactive demonstrations, the outreach successfully captured students' interest and encouraged curiosity about science and technology.

Many students expressed enthusiasm for learning more about space-related subjects, highlighting the importance of early exposure to STEM fields.

The outreach reinforced Space Clubs LASU's commitment to community engagement and youth development.

**200+**

Students Reached

# Innovation and Talent Development

The hackathon and technical session played a key role in identifying and nurturing young talent.

Participants developed skills in problem-solving, teamwork, communication, and innovation while engaging with real-world challenges related to living in space.

These activities provided a practical platform for applying theoretical knowledge and encouraged participants to think critically about future space systems and technologies.

# Partners and Sponsors Appreciation

Space Clubs LASU acknowledges and appreciates the support of partners, sponsors, and collaborators whose contributions played a vital role in the success of World Space Week 2025.

Their support enabled the delivery of impactful programs and strengthened the overall quality and reach of the events.

# Key Statistics at a Glance

World Space Week 2025 featured seven major events delivered over seven days, engaging students across multiple educational levels.

The program reached university students, secondary school students, and young innovators through both physical and virtual platforms, demonstrating strong participation and engagement throughout the week.

# Key Outcomes

- Fostered awareness of human adaptation and innovation in space environments.
- Strengthened collaboration between **Space Clubs LASU and SGAC.**
- Empowered students to pursue **STEM-driven** solutions for future space challenges.
- Inspired secondary school students toward space and science-related careers.

# Challenges and Learnings

While World Space Week 2025 was successful, the organizing team identified areas for improvement, including enhanced logistical planning, timely planning, and increased participation from external institutions.

These learnings will inform future editions and help strengthen subsequent world space week celebrations

---

# Looking Ahead

Building on the success of World Space Week 2025, Space Clubs LASU aims to expand its outreach, deepen partnerships, and introduce more hands-on and innovation-driven activities in future editions.

The club remains committed to inspiring, educating, and engaging young people in the exploration of space and its possibilities.

# Closing

World Space Week 2025 was a meaningful step toward building awareness, capacity, and enthusiasm for space science and technology within the university and surro-unding communities.

Space Clubs LASU looks forward to continued collaboration, growth, and impact in future initiatives.
