World Space Week OCTOBER 4-10

SPACE CLUBS LASU PRESENTS

WORLD SPACE WEEK 2026

IMPACT REPORT

Space Clubs LASU

Theme: Rocket Revolution

October 4th – 10th, 2026

Official Partners: RARSGRAM

INSPIRE · EDUCATE · ENGAGE

Foreword

Atolagbe Yusuf
Chairman, World Space Week Committee
Space Clubs, Lagos State University
www.spaceclubslasu.org

World Space Week provides an important opportunity to reflect on humanity's growing presence beyond Earth and to inspire the next generation to actively participate in shaping that future.

In 2026, Space Clubs LASU, under the global theme **"Rocket Revolution"**, explored the engineering, economics and opportunities behind reaching space, and what they mean for Africa.

Throughout this week, we engaged university students and young innovators through webinars, competitions and interactive sessions designed to make space science accessible, relevant, and inspiring. Each activity was intentionally structured to spark curiosity, build knowledge, and encourage critical thinking about the role of space in solving global challenges.

We extend our sincere appreciation to our speakers, panelists, judges, partners, volunteers, committee and participants whose contributions made World Space Week 2026 a success. As we look ahead, **Space Clubs LASU** remains committed to creating platforms that inspire, educate, and engage young people in the wonders of space science and technology.

World Space Week 2026 Overview

World Space Week 2026 at Lagos State University was designed as a seven day program that combined knowledge sharing, innovation, competition and career guidance. Guided by the global theme **"Rocket Revolution"**, the week explored what it takes to launch from Africa, how satellite data is put to work, how rockets are designed and built, how reusable rockets change the economics of space, and how young people can build careers in the space sector.

The program targeted university students, young professionals, and space enthusiasts. All activities were delivered virtually, ensuring accessibility while maintaining strong interaction and participation throughout the week.

The event lineup included **four webinars and sessions, a technical poster contest, and a virtual hackathon**, all strategically arranged to build momentum and sustain engagement across the week. A team of 12 committee members and 9 volunteers kept every session running smoothly.

Event Highlights and Impact

DAY 01

Launching From Africa: What It Takes To Scale A Launch Capability

4TH OCT 2026 **5:00PM WAT**

The opening webinar was anchored by **Engr. Gbajabiamila Babatunde**, a Mechanical Engineer with years of experience in CAD design and space systems engineering.

He showed students what it takes to build a launch capability on the continent, setting the tone for the week: space is not far away, and Africa has a role to play.

29 participants joined the session, which gave attendees a foundational understanding for the activities that followed.

DAY 02

RSAT Mission Control: Build With Satellite Data

5TH OCT 2026 **5:30PM WAT**

Muhammad Ibrahim, Founder and CEO of RARSGRAM Ltd, took students into the world of satellite data. RARSGRAM Ltd also opened its RSAT Mission Control platform to LASU students, giving them access to its satellite data until the end of World Space Week 2026.

67 participants visited the platform and **28 participants** joined the webinar session, and gained a practical view of how satellite data is used to solve real problems.

DAY 04

Model Rockets 101: Design, Build And Launch

7TH OCT 2026 5:00PM WAT

Engr. Samuel Gboyinde, an Aerospace Engineer with strong experience in building model rockets, walked participants through how model rockets are designed, built and launched.

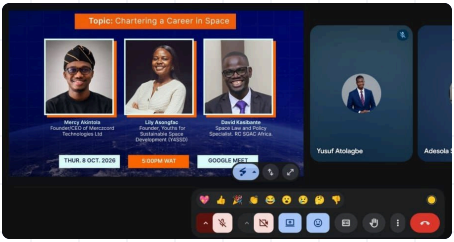

It was the most engaging session of the week, with an engagement rate of **20.83%** on our platforms. **23 participants** attended live.

DAY 05

Panel Session: Chartering A Career In Space

8TH OCT 2026 5:00PM WAT

Mercy Akintola (geospatial scientist and Co-NPoC, SGAC Nigeria), **Lily Asongfac** (telecommunications engineer and International Account Manager, SpaceVrse), and **David Kasibante** (space law and policy specialist and Chair, SGAC Africa) shared insights on pathways into the space sector, from space law to space technology.

33

participants at its peak, the largest audience of the week

The session reflected strong demand among young people for guidance on space careers.

DAY 06

Technical Poster Contest

9TH OCT 2026 | **5:00PM WAT**

Students addressed the topic **"The Economics and Engineering of Reusable Rockets."** A total of 14 entries were received from 5 teams across Lagos State University and the University of Ibadan, and 4 advanced to the final round.

Finalists presented to a panel of two judges: **Eunice Olubayo** (NPoC, SGAC Nigeria) and **Sekouba Touré** (Space Systems Engineer and NPoC, SGAC Guinea).

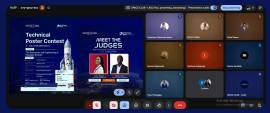

14	5	4	29
Entries received	Teams	Finalists	Finale viewers

Entries were scored on research, originality, relevance, visual design, impact, technical and economic soundness, and handling of questions.

WINNER

Dara Peace Udochukwu

"The Breakeven Economics of Reusability"

DAY 07

Orbithon: World Space Week Hackathon

10TH OCT 2026 | **5:00PM WAT**

Orbithon served as the innovation core of World Space Week 2026. Teams built on the theme **"Beyond Orbit: Democratising Access and Launch Infrastructure"**.

Two teams reached the final round, where judges **Oluwafemi Michael Daramola** (Embedded Systems Engineer) and **Samuel Gboyinde** scored them on impact, technical implementation, idea quality, prototype feasibility and innovation. **18 participants** joined the event.

WINNING TEAM

TOP-MARS

Building a low cost, open source LoRa telemetry and recovery module for university and grassroots teams across Africa. This is a real solution to a real problem for student rocketry teams.

₦20,000	₦40,000	100%
to each winner	total prizes awarded	of finalists certified

All finalists received certificates, and each winner received ₦20,000, a total of ₦40,000 in prizes.

Innovation and Talent Development

The technical poster contest and the Orbithon hackathon played a key role in identifying and nurturing young talent.

Participants developed skills in research, problem solving, teamwork, communication, and innovation while engaging with real challenges related to launching, recovering and reusing rockets in Africa.

The contests drew 14 poster entries from 5 teams across 2 universities, and the Orbithon winner, TOP-MARS, is building a real telemetry and recovery module for student rocketry teams. These activities gave students a practical platform to apply theoretical knowledge and to think critically about future space systems and technologies.

What Participants Said

Every participant who gave feedback rated the program **4 out of 5**, said their interest in a space career had grown, and said they would definitely join future programs. They told us they gained:

- Exposure to ideas beyond what they already knew
- The ability to turn ideas into practical solutions
- A clear picture of the stages involved in rocket science
- A better understanding of the space industry

> *I genuinely enjoyed WSW'26, especially the poster session, where participants shared their impressive projects and ideas. The presentations were insightful and broadened my perspective on what is possible in space technology. Overall, it was a valuable and inspiring experience, even as an executive of Space Clubs LASU.*

Partners Appreciation

Space Clubs LASU acknowledges and appreciates the support of partners and collaborators whose contributions played a vital role in the success of World Space Week 2026.

Our partnership with **RARSGRAM Ltd** brought a satellite industry leader into the classroom of LASU students and gave them access to its data. Speakers, panelists and judges from across the space community gave their time, and their support strengthened the overall quality and reach of the events.

09

CASH PRIZES AWARDED

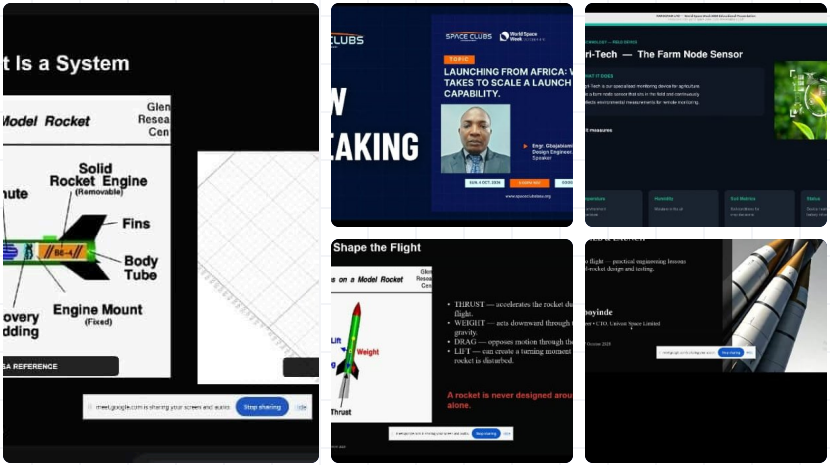

₦40,000

To winners of the competitions

10

Key Outcomes

- Fostered awareness of launch capability, satellite data and reusable rocket technology in an African context.
- Gave LASU students access to real satellite data through the partnership with **RARSGRAM Ltd**.
- Empowered students to turn ideas into practical, **STEM driven** solutions, such as the TOP-MARS telemetry and recovery module.
- Inspired young people toward space and science related careers.

Moments from the virtual sessions: Model Rockets 101, Launching From Africa and RSAT Mission Control.

Link to Rocket Revolution and the SDGs

The program reflected the Rocket Revolution theme through launch capability, rocket design and recovery, satellite data applications, reusable rocket technology and career pathways in space. It supports three Sustainable Development Goals:

4
Quality Education
Open learning on space science and engineering

9
Industry, Innovation & Infrastructure
Student innovation such as the TOP-MARS module

17
Partnerships for the Goals
RARSGRAM Ltd and experts across the space community

Challenges and Learnings

While World Space Week 2026 was successful, the organizing team identified areas for improvement, including:

Wider participation
from external institutions, since the competitions drew entries from two universities.

Stronger promotion
to grow live attendance across the sessions.

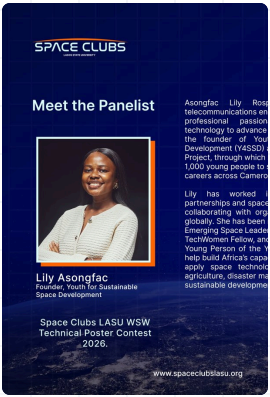

These learnings will inform future editions and help strengthen subsequent World Space Week celebrations.

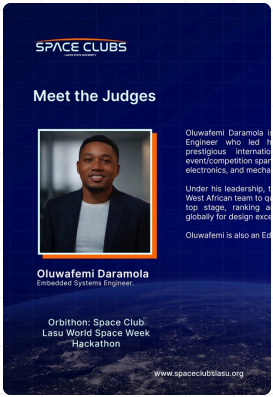

Looking Ahead

Building on the success of World Space Week 2026, Space Clubs LASU aims to expand its outreach, deepen partnerships, and give students more chances to turn their ideas into real projects through more hands on and innovation driven activities in future editions.

The club remains committed to inspiring, educating, and engaging young people in the exploration of space and its possibilities.

Closing

World Space Week 2026 was a meaningful step toward building awareness, capacity, and enthusiasm for space science and technology within the university and surrounding communities.

We thank our speakers, panelists, judges, volunteers, committee and partner for making this week count. Space Clubs LASU looks forward to continued collaboration, growth, and impact in future initiatives.
